

Curve treadmill

 bodytone.eu/en/shop/home/treadmills/zrot4

The ZRO-T4 is an elite fitness running machine that synthesizes an intense workout in a small format. The name says it all: a treadmill that consumes ZRO electricity and doesn't leave you indifferent!

No motor and easy to move: The ZRO-T4 runs on user's power with no electricity consumption and a low carbon footprint. Users will be impressed by the intense training they can generate with the power of their two feet. The ZRO-T4 is one of the lightest treadmills in its range, weighing only 70 kg. Its light weight combined with a 100% foldable handlebar and integrated transport wheels makes it easy to quickly reconfigure your training space.

Keeps your interval training up to date: The ZRO-T4 was designed with the HIIT in mind. With no top speed, users can make their workout as hard as they want, as well as change speeds at will. With the small footprint of the ZRO-T4, running (which would otherwise require outdoor space or a different area in the facility) can now be done in the same location as small group training, increasing the user's commitment to the trainers.

Robust and durable

Designed with a steel frame and handrail, corrosion-resistant material and a sheet running surface to provide excellent durability and strength, the ZRO-T4 is built to last. In addition, with no transmission motor or lift motor, the ZRO-T4 requires very little maintenance.
